SUMMARY

Full Stack Developer and Computer Science undergraduate 3rd YEAR specializing in Java, Spring Boot, and MERN architectures. Proven track record of engineering scalable, secure backend systems, highlighted by building an enterprise RBAC platform that sustained 51,000+ API requests with a 0.999 APDEX and 0% error rate. Strong foundation in Data Structures & Algorithms, PostgreSQL/MongoDB database design, and modern DevOps practices (Docker, Prometheus) to deliver high-performance, production-ready software.

TECHNICAL SKILLS

Languages: Java, JavaScript, C++, SQL

Backend & Security: Spring Boot, Spring Security, Spring Data JPA, Hibernate, Node.js, Express.js, REST APIs, JWT Authentication

Frontend: React.js, Redux Toolkit, Tailwind CSS, Vite, HTML5, CSS3

Databases & Caching: PostgreSQL, MongoDB, Redis

Testing & Monitoring: JUnit 5, Mockito, Testcontainers, Apache JMeter, Prometheus, Grafana, Micrometer

DevOps & Tools: Docker, Docker Compose, Git, GitHub, Maven, Postman, GitHub Actions, Nginx

Core Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, Concurrency & Multithreading

AI & Cloud: LLM APIs, Gemini API, Groq API, AWS S3, Cloudinary

EXPERIENCE

UptoSkills — Full Stack Developer Intern | May 2026 – August 2026

- Engineered modular **Company Recruitment & Candidate Lifecycle** backend services using **Node.js, Express.js, and PostgreSQL**, implementing candidate status transitions, interview workflows, offer management, and company dashboard analytics.
- Designed and integrated **relational data models and 15+ RESTful APIs** for company profiles, recruitment drives, interviews, assessments, disputes, and administrative workflows, secured with **JWT authentication middleware**.
- Resolved a cross-module **candidate status synchronization** issue across recruitment drives, shortlisted candidates, interviews, offers, and company dashboards by introducing modular service-layer workflows and centralized lifecycle state handling.
- Delivered and merged **3 production pull requests** into the Pragati codebase, including company backend architecture, company settings APIs with React integration, and candidate lifecycle synchronization, with API/schema documentation and validation.

Intern Infobyte — Full Stack Developer Intern | May 2026 – August 2026

- Developed and delivered multiple **MERN-based web applications** including E-Commerce, Weather, Movie Recommendation, and Task Management systems, implementing responsive React interfaces and RESTful Node.js/Express.js APIs.
- Built backend workflows using **Node.js, Express.js, and MongoDB**, implementing CRUD operations, API request handling, data persistence, and frontend-backend integration across internship projects.
- Developed reusable frontend components and application workflows for **task management, e-commerce, weather, and recommendation use cases**, strengthening full-stack development, API integration, state management, and responsive UI development..

PROJECTS

Enterprise Employee & Asset Management System — RBAC

Tech Stack: Java, Spring Boot, Spring Security, PostgreSQL, React.js, Redis, Docker, Prometheus, Grafana, Apache JMeter

- Engineered an enterprise **employee and asset management platform** using **Java, Spring Boot, React, PostgreSQL, and Redis**, exposing REST APIs for employee, department, and asset management workflows with JWT-based RBAC.
- Implemented **concurrency-safe asset allocation** using JPA optimistic locking and database-level locking, while optimizing persistence with **@EntityGraph, N+1 query elimination, pagination, and transactional workflows**.
- Built automated integration and unit testing using **JUnit 5, Mockito, and Testcontainers**, and containerized the application with **Docker Compose** for consistent development and deployment.
- Load-tested the REST APIs at the **1,000-user test level**, processing **51,000 requests at 263.92 req/s with 0% observed errors**, achieving **21.40 ms average latency, 24 ms P95 latency, and 0.995 APDEX** using Apache JMeter.

Real-Time Collaborative Workspace — Jira-Lite Kanban Tracker

Tech Stack: React 18, Node.js, Express.js, Redux Toolkit, Socket.io, Redis, PostgreSQL, JWT, Docker, Nginx

- Engineered a real-time Kanban workspace using **React, Node.js, Redux Toolkit, and REST APIs**, implementing **O(1) fractional midpoint indexing** to reduce database writes by **98% (49 → 1)** and server execution latency by **90.5% (~104 ms → ~9.9 ms)**.
- Architected multi-room real-time synchronization using **Socket.io and Redis Pub/Sub**, reducing broadcast payload by **98.2% (<1 KB vs >50 KB full-board resync)** while implementing **Optimistic Concurrency Control (OCC)** to prevent conflicting board updates.
- Implemented secure authentication with **short-lived JWT access tokens, rotating HTTP-only refresh cookies, and token-reuse detection**, alongside **OpenAPI 3.0/Swagger-documented REST APIs** and CSV/JSON bulk data ingestion.
- Containerized the application with **Docker Compose and Nginx reverse proxy**, integrating **GitHub Actions CI/CD** and achieving **100% pass rate across 89 automated Jest and Vitest tests**.

AI-Powered Smart Document & Report Analyzer

Tech Stack: React 18, Node.js, Express.js, MongoDB, Redis, BullMQ, Gemini, Groq, Docker, JWT

- Engineered an **asynchronous document intelligence pipeline** using Node.js, BullMQ, and Redis for multi-format ingestion (PDF, DOCX, XLSX, TXT, scanned images), implementing **SHA-256 content caching** to reduce duplicate-document latency by **99.9% (<15 ms)** and avoid redundant LLM processing costs.
- Architected a **dual-LLM inference pipeline** with Google Gemini and Groq, using **Zod schema validation** and semantic text chunking to enforce structured AI outputs and reduce prompt payload by **65%**.
- Developed a **citation-backed RAG engine** using semantic chunk retrieval and similarity scoring, enabling document-grounded Q&A with exact source citations, alongside **multi-document contract comparison** and domain-specific analysis workflows.
- Built secure REST APIs with **JWT access/refresh-token rotation, HTTP-only cookies, rate limiting, Helmet, and bcrypt**, and containerized the React/Express/MongoDB/Redis stack using **Docker Compose** for reproducible deployment.

EDUCATION

Ganga Institute of Technology & Management

B.Tech(3RD) – Computer Science & Engineering | 2024–2028

CERTIFICATIONS & ACHIEVEMENTS

Hack or Crack 2.0 (CTF): Solved algorithmic & cybersecurity challenges.

Tech4Hack — Thoughtworks: Built an **AI Resume Analyzer** in a team hackathon.
